

# CMPE 261: Large Scale Programming

## Worksheet 10B

Istanbul Bilgi University

Fall 2023

### Tasks

These tasks are the same as the Worksheet 7, but in Python. You can implement the same algorithms that you've used in the C++ worksheet.

### Part I

Write a Python function that finds the reverse of a given array.

### Part II

Write a Python function that determines if a given **unsorted** array of numbers consists of consecutive numbers or not.

### Part III

Write Python functions that find intersection and union of two arrays.
